Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Applicant's election without traverse of Specie I (figures 1-2, claims 1-3, and 7) in the reply filed on 08/19/05 is acknowledged.

Specification

2. The disclosure is objected to because of the following informalities:
Page 5, line 16, please insert "space" between each of words.
Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Jones (U.S. Patent 5,734,208).

As to claim 1, Jones discloses a printed--circuit board for high-speed communication as shown in figures 1-3 comprising: a first printed-circuit board (16, column 2, line 28) having a first signal line, a second printed-circuit board (30, column 2, line 49) having a second signal line connected to said first signal line of said first

printed-circuit board (16), the first and second signal lines being connected through connector part (22) on the PC board 16,

a connector (22) including a plurality of pins (the leads formed inside the connector body) and located between said first and second printed-circuit boards so that said first signal line and said second signal line are connected by said pins, and

lossy elements (40, 41) connected to electrically open pins to which said first signal line and said second signal line of said connector are not connected (because they are connected to ground).

As to claim 2, Jones discloses ends of said lossy elements (40, 41) opposite said electrically open pins are electrically open or are connected to the ground or to a power supply.

As to claim 3, Jones discloses said lossy elements (40, 41) are connected to both ends of said electrically open pins where said first and second signal lines of said connector (22) are not connected, and ends of said lossy elements opposite said electrically open pins are electrically open or are connected to the ground or to a power supply.

As to claim 7, Jones discloses said lossy elements (40, 41) are selected from the group consisting of a resistance part, see column 2, line 58 through column 3, line 39.

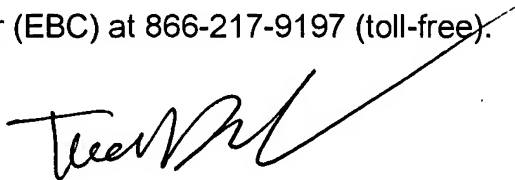

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Matsui, Sanwo et al., Osaka et al., Takekuma et al., McCall et al., Gasbarro, and Deneroff et al. disclose related art.
